

Obagi™ Blue Peel

Continue your remarkable skin transformation in less than an hour with the Obagi™ Blue Peel. Based on your particular skin needs, we determine the strength and depth of Trichloroacetic Acid (TCA) peels and number of coats applied. A blue mixing base with built-in safeguards helps ensure consistent results every time. We control the procedure. You enjoy the results.

Only the Obagi™ Blue Peel features built-in controls to promote superior outcomes, including simple coat system, even application and fixed concentrations of TCA to reduce variables such as overpainting, non-ionic blue base with glycerin that acts as a color guide and slows TCA penetration for a more even, uniform distribution, and easy-to-recognize endpoints that signal desired depth, determining outcome.

The Obagi™ System is best for patients who want a fast procedure with dramatic results. In less than an hour, an in-office procedure, Obagi™ Blue Peel is effective for many skin conditions, including laxity, wrinkles, hyperpigmentation, large pores, comedones and more. For all skin colors and thicknesses. For use on the face, neck, chest, hands and arms. For patients who want a strong solution, that's fast and permanent.

The Obagi™ Blue Peel is a quick and simple procedure that does not typically require sedation. Application typically to the face and neck takes about 20 minutes, depending on the number of coats applied. You can expect a burning sensation that lasts only a few minutes and a bluish tint to your skin that usually washes off in 12 to 24 hours. Following the procedure, you will experience light swelling. Within two to three days, your skin will begin to peel. This peeling continues over the next several days. By the seventh to tenth day, you skin should be healed and start looking younger and healthier.

"Dr. Shah was great. Very nice and professional. He answered all of my questions even before I asked them. I would definitely recommend his office to anyone interested in cosmetic surgery."

The Obagi™ Skin Transformation System uses a unique combination of active and prescription ingredients - including Tretinoin and Hydroquinone 4% - to maximize penetration to all skin layers. The specific dosage and frequency are determined and monitored by us, according to your skin condition, needs and lifestyle.

The System triggers a Therapeutic Cascade™ that:

- Increases cellular turnover of abundant, healthy keratinocytes, pushing fresh cells to the surface more quickly and promoting old cells to exfoliate faster.
- Suppresses melanocyte production reversing and preventing hyperpigmentation.
- Promotes the even distribution of melanin, eliminating unwanted dark patches and age spots.
- Repairs intracellular transcription of keratinocytes, producing healthy, uniform cells for better skin structure.
- Stimulates fibroblasts to increase collagen and elastin formation, resulting in stronger, more resilient skin.
- Increases GAG synthesis, providing natural hydration and necessary nutrients to the epidermis.
- Increases angiogenesis, improving blood flow.

"I have only wonderful things to say about your office. Thank you very much for your care and understanding of my needs!"

The Obagi™ Skin Transformation System is best for patients who are willing to commit to a comprehensive skin care protocol and are concerned about mild to severe photodamage. The system is also for those who want to eliminate sun or age spots and have hyperpigmentation, have fine lines, wrinkles and laxity, and experience adult acne. Ask Beautologie if the Obagi™ Skin Transformation System is right for you.
